PowerMax-Pro kW Sensors

1W to 3 kW

PowerMax-Pro laser detectors have been enhanced to enable multi-kW continuous power measurement of laser beams. PowerMax-Pro detectors, first introduced in 2014, are based on Coherent's proprietary thin film sensor technology that combines the broad wavelength sensitivity, dynamic range and laser damage resistance of a thermopile, with the response speed of a semiconductor photodiode. These sensors are compatible with the LabMax-Pro SSIM meter that has software available for both desktop and mobile platforms.

Traditional thermopile detectors typically take at least sixty seconds for a stable kilowatt power reading. PowerMax-Pro accomplishes this measurement within microseconds with no overshoot, saving significant time for engineers, production and QA staff, and enables increased process throughput when built into systems.

Another important aspect of kilowatt class power measurements is dealing with back reflection from the detector. Traditional thermopiles can reflect 10-15% back toward the source and must be a major consideration when setting up for a measurement. The PowerMax-Pro kW sensor's unique optical design traps >99% of the light inside the enclosure, and when used with a direct QBH fiber adapter option 100% of the light is captured, resulting in a Class 1 measurement system.

The new PowerMax-Pro kW models will be particularly useful for welding, cutting, drilling, and engraving with high power fiber lasers, CO₂ lasers, or solid state lasers.

FEATURES

- Very fast 20 µsec response time
- Measures high average power to 3 kW
- Large 30 mm active area
- Less than 1% back reflection
- QBH adapter available for Class 1
 measurement

APPLICATIONS

- Welding
- Cutting
- Engraving
- Marking

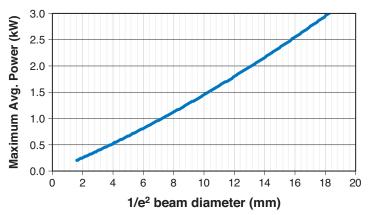

SPECIFICATIONS	PMP 1 kW	PMP 3 kW
Average Power Range ¹ (continuous)	1W to 1 kW	1W to 3 kW
Maximum Pulsed Peak Power (kW)	1	5
Noise Equivalent Power Standard Mode (10 Hz) High Speed Mode (20 kHz) Snapshot Mode (625 kHz)	<50 mW <0.5W <1.5W	
Maximum Power Density (kW/cm ²)	5.0 at 1 kW avg. power	2.4 at 3 kW avg. power
Rise Time (µs)	≤20	
Fall Time (µs)	≤20	
Protective Front Window	Available for 1070 nm model (see part number below)	
Active Area (mm) Horizontal Axis Vertical Axis	30 (element is 57 mm from front plate) 27.5 (element is 57 mm from front plate)	
Minimum Beam Size (mm)	10 at 1 kW avg. power	20 at 3 kW avg. power
Calibration Uncertainty (%) (k=2)	±2.5	
Power Linearity (%)	±3	
Back Reflection (%) when used with QBH Adapter (Class 1)	<1 0	
Wavelength Range (%)	Fixed calibration point ±50	
Calibration Wavelength ²	810 nm, 1070 nm, 10.6 µm	
Cooling Method ³	Water	
Cable Type	DB25	
Cable Length	3m (9.8 ft.)	
Part Number 810 nm (no window) 10.6 μm (no window) 1070 nm (no window) 810 nm, 1070 nm and 10.6 μm (no window) 1070 nm (with window)	1324794 1324795 1324796 1324797 1325221	1325222 1325223 1325224 1325225 1325226
Optional Accessories QBH Adapter Plate C-Mount Adapter Plate Replacement 1070 nm Window	1319787 1319788 1324793	

See power handling curve for beam size requirements.
 Wavelengths typical; model dependent.
 1 gpm water flow with less than 10 PSI back pressure.

TYPICAL PERFORMANCE DATA

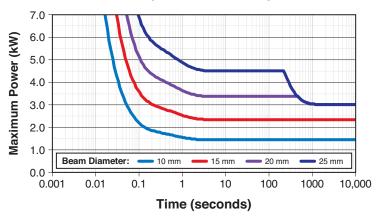

This chart indicates the maximum average power the sensor can handle based upon beam diameter.

Maximum Average Power by Beam Diameter

This chart can be used to determine intermittent power handling capability at powers above 3 kW.

The plot shows the length of time the sensor can be exposed to particular powers with several beam diameters.

Laser Power by Beam Size and Exposure Time

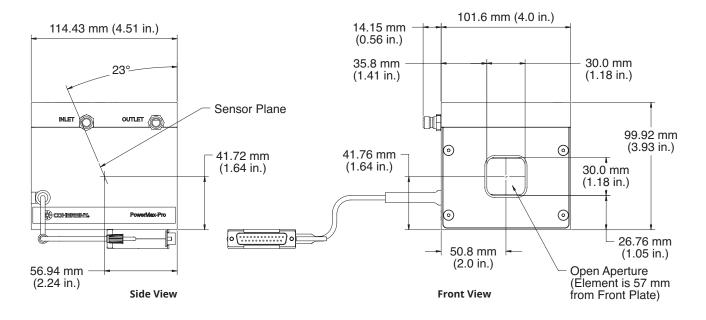

NOTES:

- 1) We do not recommend any long term usage above 3 kW average power because the housing can become too hot and the heat sink absorber can easily damage. At 3 kW the top front portion of the enclosure will reach 83°C in approximately 1000 seconds (at 2 kW average power the enclosure will reach 61°C at 1000 seconds and at 1 kW the enclosure reaches 51C at 1000 seconds).
- 2) The sensor can be used above 3 kW intermittently for up to 200 to 400 seconds with increasingly larger beams.
- 3) With a 20 mm diameter beam, this sensor can be used safely with modulated sources with peak powers up to 5 kW and pulse lengths up to 100 milliseconds.
- 4) If care is taken to increase the beam size to 25 mm, the sensor could be used with modulated peak power up to 7 kW for 100 milliseconds.
- 5) These curves are for Gaussian beam profiles. Flatter beams can handle higher powers (~5%) for longer lengths of time, and beams with hot spots or "super Gaussian" beams the curves must be de-rated by up to 30%. Contacting Coherent LMC applications engineering for more detailed information.

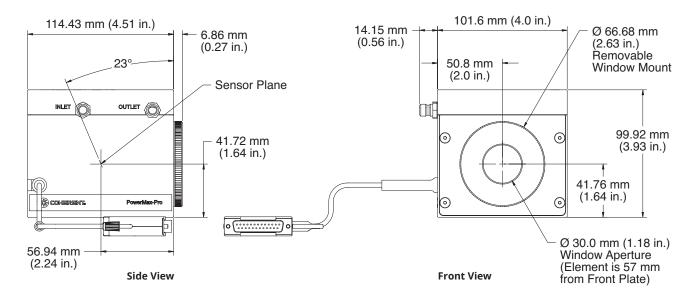

MECHANICAL SPECIFICATIONS

PowerMax-Pro 1 kW and 3 kW Free Space Models

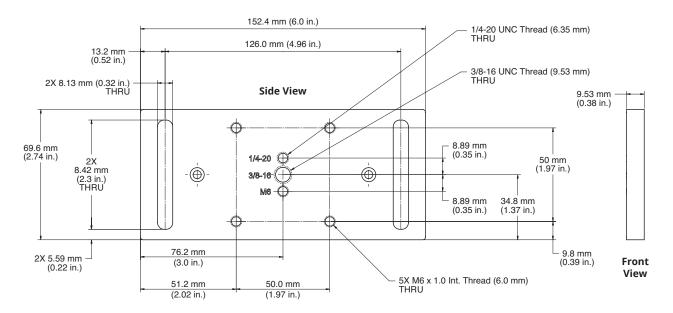

PowerMax-Pro 1 kW and 3 kW with Window Models

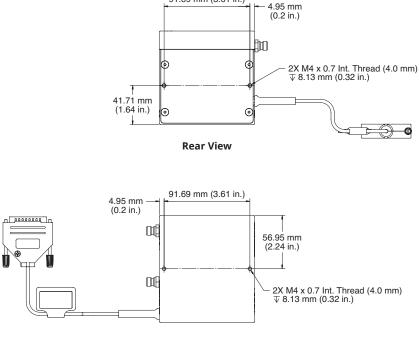

MECHANICAL SPECIFICATIONS (cont.)

Mounting Plate Accessory (included with all models)

Mounting Features on Rear of all PowerMax-Pro kW Sensors

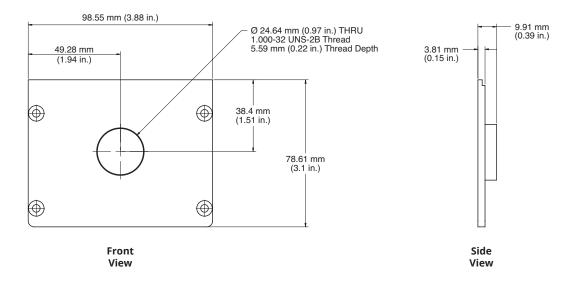

91.69 mm (3.61 in.)

Bottom View

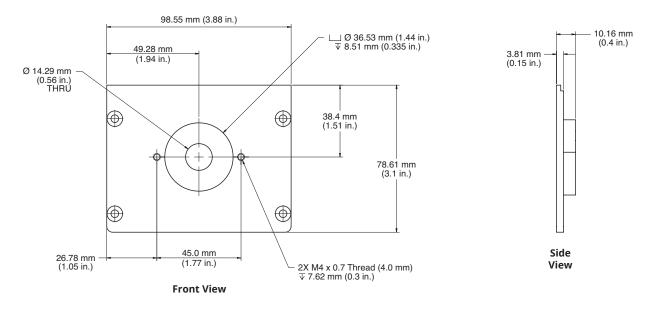

OPTIONAL ACCESSORIES

C-Mount Front Plate (for use with free space models)

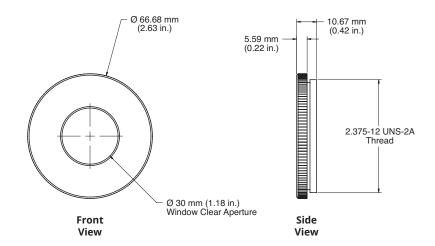

QBH-Mount Front Plate (for use with free space models)

OPTIONAL ACCESSORIES (cont.)

Replacement Window Assembly
