10	-10	115	2	265	3,225
5	-5	115	2	148	1,613

**Table 1.** AI Absolute Accuracy (Continued)

Nominal Range Positive Full Scale	Nominal Range Negative Full Scale	Residual Gain Error (ppm of Reading)	Offset Tempco (ppm of Range/°C)	Random Noise, $\sigma$ ( $\mu$ Vrms)	Absolute Accuracy at Full Scale ( $\mu$ V)
2	-2	117	2	74	650
1	-1	124	3	50	333

**Note** For more information about absolute accuracy at full scale, refer to the *AI Absolute Accuracy Example* section.

Gain tempco 16.7 ppm/°C

Reference tempco 5 ppm/°C

Residual offset error 12 ppm of range

INL error 126 ppm of range

**Note** Accuracies listed are warranted for up to one year from the device external calibration when the device is within 10 °C of the external calibration temperature and 1 °C of the last self calibration, when averaging 10,000 DC samples. Other accuracies may be calculated for different temperatures and sample sizes using the given equations.

**Notice** This product may become more sensitive to electromagnetic disturbances in the operational environment when test leads are attached or when connected to a test object.

## AI Absolute Accuracy Equation

$AbsoluteAccuracy = Reading \cdot (GainError) + Range \cdot (OffsetError) + NoiseUncertainty$

$GainError = ResidualGainError + GainTempco \cdot (TempChangeFromLastInternalCal) + ReferenceTempco \cdot (TempChangeFromLastExternalCal)$

$OffsetError = ResidualOffsetError + OffsetTempco \cdot (TempChangeFromLastInternalCal) + INLError$

$NoiseUncertainty = \frac{Random\ Noise \cdot 3}{\sqrt{10,000}}$  for a coverage factor of 3  $\sigma$  and averaging 10,000 points.

## AI Absolute Accuracy Example

Absolute accuracy at full scale on the analog input channels is determined using the following assumptions:

- $TempChangeFromLastExternalCal = 10\text{ }^{\circ}\text{C}$
- $TempChangeFromLastInternalCal = 1\text{ }^{\circ}\text{C}$

- $number\_of\_readings = 10,000$
- $CoverageFactor = 3 \sigma$

For example, on the 10 V range, the absolute accuracy at full scale is as follows:

$$GainError = 115 \text{ ppm} + 16.7 \text{ ppm} \cdot 1 + 5 \text{ ppm} \cdot 10 = 181.7 \text{ ppm}$$

$$OffsetError = 12 \text{ ppm} + 2 \text{ ppm} \cdot 1 + 126 \text{ ppm} = 140 \text{ ppm}$$

$$Noise\ Uncertainty = \frac{265 \mu\text{V} \cdot 3}{\sqrt{10,000}} = 8 \mu\text{V}$$

$$AbsoluteAccuracy = 10 \text{ V} \cdot (GainError) + 10 \text{ V} \cdot (OffsetError) + NoiseUncertainty = 3225 \mu\text{V}$$
