A full selection of accessories is available to help create an ergonomic workspace to meet many requirements (See Pages 11-14).

The Rigid ScienceDesk frame is an ideal choice if the local environment does not contain any significant structural vibration or if your application can tolerate these vibrations. If this is not the case, you should select either the Passive or Active ScienceDesk option. There are six frame sizes that accept breadboards from our Ultralight, Performance, and PerformancePlus series breadboards. Many accessories are available to create an efficient and ergonomic working environment (see pages 11-14).
